

Malaria Deaths in Africa: 2000-2014

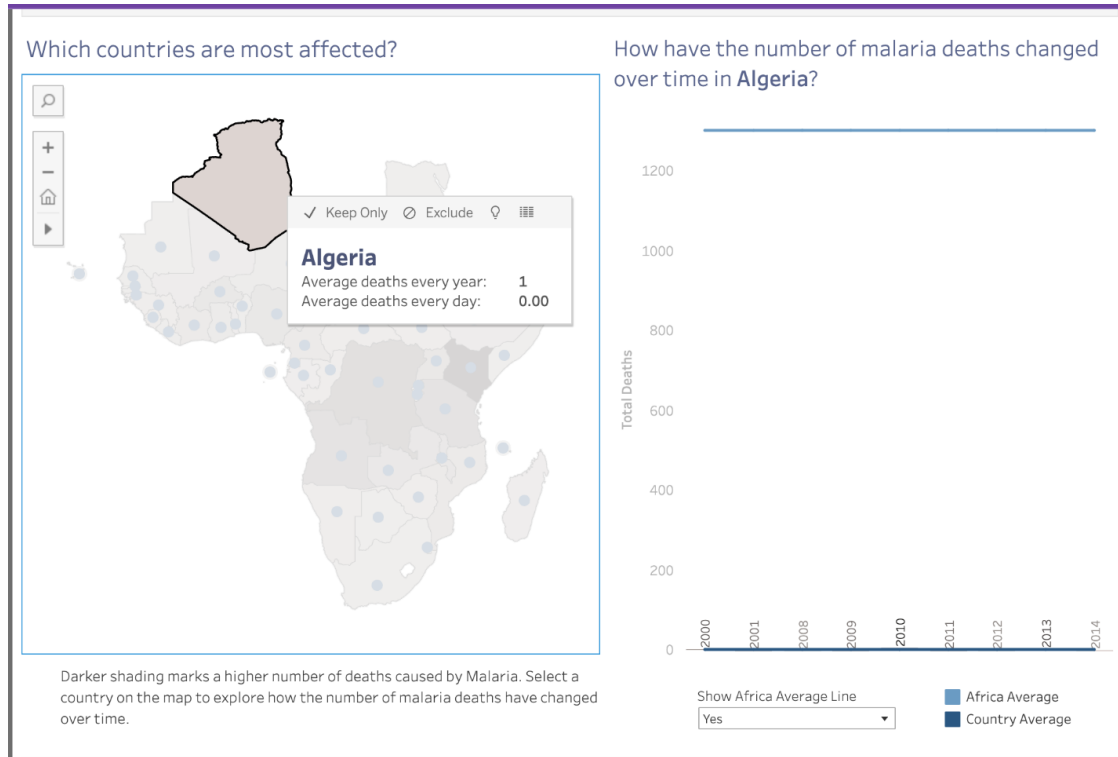

Country with highest average death rate

Insight

When I looked at the dashboard, I hovered around different countries and I noticed that Kenya shows the highest average deaths due to malaria from 2000-2014 and the average death per day is 76.43, higher than any other country. 2003 marks the most deaths exceeding more than 50k, when we look at the bar graph. Africa's death average(1,303) is much lower than the average deaths in Kenya(27,896).

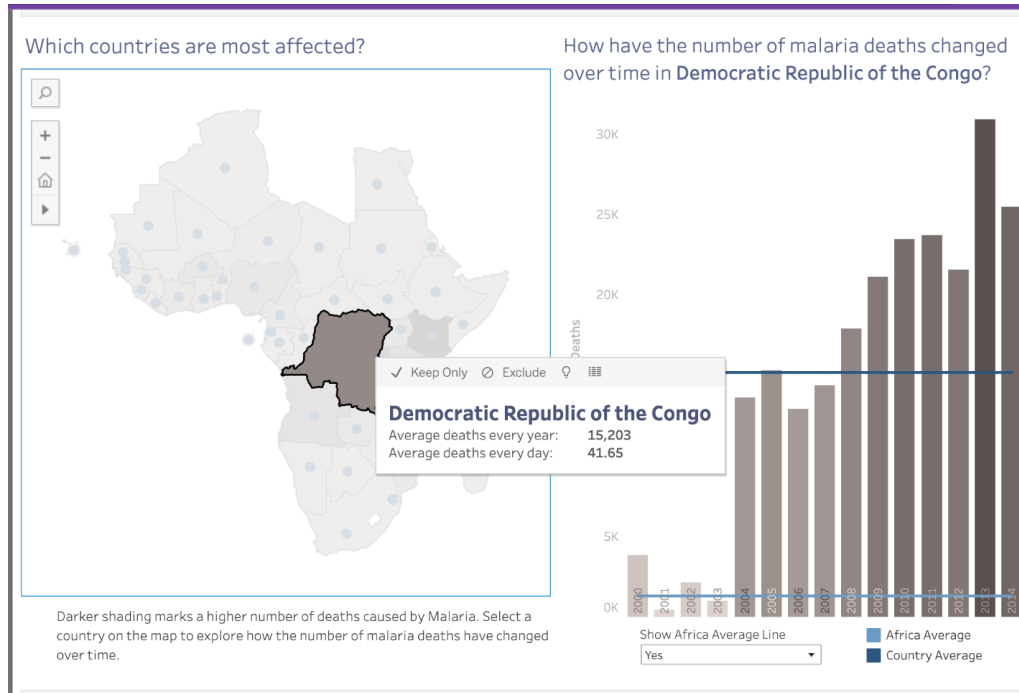

Country with lowest average death rate

Insight

From the dashboard, when Algeria is highlighted, the bar graph clearly depicts that there had been one death from malaria. While Kenya shows the highest average deaths, Algeria has the lowest deaths among Africa from 2000-2014. From the provided data, it can be said that only one person has died throughout the country which is really low when compared to the whole of Africa.

Strange pattern of death rate

Insight

From the dashboard, I clicked on Democratic Republic of the Congo on the map and it showed an average death of 15,203. While other countries show a decline in the number of deaths over time, Democratic Republic of the Congo appears to have a strange pattern of death rate, showing an increasing number of deaths over the years with 2013 and 2014 being abnormally high. Similar to Kenya, average deaths of Democratic Republic of the Congo(15203) exceeds the overall death average of Africa.
